

Ethan Brooks

City, Country candidate.email@example.com +000 000 0000

Profile

Data Engineering student at Faculté des Sciences de Sfax with solid expertise in Big Data ecosystems, distributed processing, and scalable data architectures. Proven ability to design and optimise end-to-end data pipelines, deploy ELK monitoring stacks, and build data-driven CRM solutions on Salesforce Data Cloud. Passionate about turning massive, heterogeneous datasets into reliable, high-performance platforms that enable analytics, AI, and business intelligence.

Education

Faculté des Sciences de Sfax ill Sep 2021 – Jul 2026

B.Sc. in Data Engineering

Relevant coursework: Distributed Systems, Hadoop Ecosystem, Cloud Computing, Machine Learning

Professional Experience

Data Engineer ill Feb 2026 – Present

OliveSoft, Sfax

- Designed and deployed Salesforce Data Cloud streams that unified **200 k+** customer records, reducing data latency from 12 h to under 30 min (96% improvement).
- Leveraged Einstein Discovery to create a Unified Customer Profile, increasing cross-sell campaign conversion by **15%**.
- Developed a rule-based segmentation framework serving **5** market segments, enabling targeted promotions and boosting average order value by **8%**.
- Built an intelligent Loyalty Management program (points, tiers, personalised offers) that raised repeat-purchase rate by **12%** within three months.

AI Engineer (RAG Assistant) ill Jun 2025 – Aug 2025

BIOMEDIQA GROUPE, Kairouan

- Created a Retrieval-Augmented Generation assistant that ingested **10 k+** internal documents (PDF, DOCX, TXT) and answered queries with **92%** relevance.
- Implemented a full-stack solution (FastAPI, React, LangChain) and integrated Ollama to run LLaMA models locally, cutting inference cost by **70%**.
- Developed real-time vector indexing and source citation, reducing average response time from 4 s to **1.2 s** (70% faster).
- Added user-feedback tracking, leading to a **25%** improvement in answer accuracy after the first iteration.

Data Engineer (Intern) ill Jun 2024 – Jul 2024

BIOMEDIQA GROUPE, Kairouan

- Designed, configured, and optimised an ELK (Elasticsearch, Logstash, Kibana) cluster for monitoring logs of **5** tenant applications.
- Implemented log parsing pipelines that reduced incident detection time from 45 min to **20 min** (55% improvement).
- Automated index lifecycle management, cutting storage costs by **30%**.

Academic Projects

Real-Time Sales Forecasting Platform ill Jan 2023 – May 2023

- Built a streaming pipeline with Apache Kafka, Spark Structured Streaming, and PostgreSQL that processed **1 M+** sales events daily.
- Integrated Prophet models for demand prediction, achieving a mean absolute percentage error (MAPE) of **4.2%**.

Associative Experience

Volunteer Data Analyst – Local Tech Community ill Sep 2022 – Dec 2022

Skills

% **Programming Languages:** Python, SQL, Java, Bash

Big Data & Distributed Systems: Hadoop, Spark, Kafka, Flink

Cloud & Orchestration: AWS (S3, EC2, Lambda), Docker, Kubernetes, Apache Airflow

Data Modeling & ETL: dbt, Talend, Airflow DAGs, Snowflake

Machine Learning & NLP: Scikit-learn, TensorFlow, LangChain, Retrieval-Augmented Generation

Monitoring & Visualization: ELK Stack, Grafana, Prometheus

Languages

Arabic: Native French: Professional English: Fluent

Certifications and Awards

- Astronomer Certification for Apache Airflow 3 Fundamentals
