

Emma Foster

Sfax, Tunisia candidate.email@example.com +000 000 0000

Profile

Data Engineer with over 3 years of experience designing, implementing, and maintaining end-to-end data pipelines across the MENA region. Expert in building robust Apache Airflow DAGs, optimizing ETL workflows with Talend, and ensuring operational visibility through Datadog monitoring. Proficient in Python, SQL, and cloud-native data platforms, delivering scalable solutions that improve data reliability and reduce processing time by up to 35 %.

Education

National Engineering University Name ill 2020 – 2023

Bachelor of Engineering in Computer Science

IPEIS – Preparatory University Name ill 2018 – 2020

Scientific Preparatory Cycle

Professional Experience

Data Engineer ill July 2023 – Present

OliveSoft, Sfax

- Designed and deployed 12 Apache Airflow DAGs handling > 50 TB of raw data per month, reducing pipeline latency by 28 %.
- Migrated legacy Talend jobs to a cloud-native architecture on Azure Data Factory, cutting operational costs by 22 % and improving data freshness from 24 h to 4 h.
- Implemented Datadog monitoring and alerting for all data pipelines, decreasing mean time to detection (MTTD) of failures from 45 min to 7 min.
- Mentored 4 junior engineers, leading weekly code-review sessions that increased code quality metrics (code coverage) by 15 %.

Data Engineering Intern ill June 2022 – August 2022

OliveSoft, Sfax

- Developed an automated data ingestion pipeline using Python and Airflow, processing 1 TB of sales data weekly.
- Optimized SQL transformations, achieving a 30 % reduction in query execution time.

Data Engineering Intern ill July 2021 – August 2021

OliveSoft, Sfax

- Assisted in the migration of on-premise PostgreSQL databases to Azure SQL Database, ensuring zero data loss.
- Created documentation for ETL processes, improving knowledge transfer within the team.

Academic Projects

Predictive Maintenance for Industrial Sensors ill January 2023 – June 2023

- Built a time-series forecasting model in Python (Prophet) achieving 92 % accuracy on test data.
- Integrated the model into an Airflow pipeline that generated alerts in real-time, reducing unexpected downtime by 18 %.

Customer Segmentation using Clustering ill September 2022 – December 2022

- Implemented K-means clustering on a dataset of 200 k customers, identifying 5 distinct segments with a silhouette score of 0.71.
- Visualized results with Tableau, enabling the marketing team to increase campaign conversion rates by 12 %.

Associative Experience

Chairwoman – IEEE Computer Society ENIS Student Chapter ill January 2021 – January 2022

Member – IEEE ENIS Student Branch (Tunisia Section) ill October 2020 – Present

Member – Microsoft Tech Club ENIS ill October 2020 – June 2022

Skills

% Programming: Python, SQL, Bash, Java, C

Data Engineering: Apache Airflow, Talend, Azure Data Factory, Databricks, Snowflake

Databases: PostgreSQL, MySQL, Azure SQL, MongoDB

Cloud & DevOps: Azure (Data Lake, Synapse), Docker, Git, CI/CD (GitHub Actions)

Visualization & BI: Tableau, Power BI, Looker

Monitoring: Datadog, Grafana

Languages

Arabic: Native

French: Professional

English: Professional

Certifications and Awards

- Apache Airflow 3 Fundamentals (2023)
- Datadog Fundamentals (2022)
- IEEE ENIS Student Branch – Outstanding Member Award (2021)
