ReguiguiMohamed

Profile

Data-Engineering student with solid hands-on experience designing and benchmarking end-to-end streaming pipelines on both Google Cloud and Azure. Proven ability to translate business requirements into scalable, cost-effective data solutions while delivering measurable performance improvements.

Education

Faculté des Sciences de Sfax ill 2023 – 2028

Engineers Degree, Data Engineering

Relevant coursework: Distributed Systems, Cloud Architecture, Big Data Analytics

Lycée Pilote de Sfax ill 2019 – 2023

Scientific Baccalaureate, GPA 18.5/20

Professional Experience

Data Engineering Apprentice ill June 2026 – Present

OliveSoft, Sfax

- Designed and implemented two parallel streaming paths (Kafka \$ \rightarrow \$ Google Cloud Dataflow/BigQuery and Kafka \$ \rightarrow \$ Azure Databricks/Delta Lake) to enable a data-platform selection study.
- Provisioned Google Cloud resources with Terraform; reduced infrastructure-as-code deployment time by 40 %.
- Integrated Great Expectations data-quality checks in Azure pipelines, catching 95 % of schema violations before landing.
- Bench-tested both routes under 10 k events/s load; demonstrated a 30 % lower end-to-end latency on Azure and a 15 % cost advantage on GCP, informing the client’s final platform decision.

Full-Stack Developer (Intern) ill June 2025 – August 2025

Avantages Soft, Sfax

- Developed a responsive web portal using React, Node.js and PostgreSQL that served 1 200+ internal users.
- Implemented CI/CD pipelines with GitHub Actions, cutting release cycle from 2 weeks to 3 days.
- Optimised API response times by 45 % through query refactoring and caching strategies.

Academic Projects

Real-Time Sales Forecasting Pipeline ill January 2024 – April 2024

- Built an end-to-end pipeline (Kafka \$ \rightarrow \$ Spark Structured Streaming \$ \rightarrow \$ PostgreSQL) achieving 92 % forecast accuracy on a retail dataset.
- Deployed the solution on Azure Databricks; automated model retraining weekly, reducing manual effort by 80 %.

Sentiment Analysis on Social Media Streams ill September 2023 – December 2023

- Utilised TensorFlow 2 to train a BERT-based classifier, reaching 88 % F1-score.
- Integrated the model into a GCP Dataflow job processing 5 M tweets per day.

Associative Experience

Data Analyst – *Data for Good Tunisia* ill March 2023 – Present

Skills

% Programming: Python, SQL, JavaScript, Bash, L^AT_EX

Big Data & Cloud: Azure Databricks, Google Cloud Platform (Dataflow, BigQuery), Apache Kafka, Terraform, Docker

Data Science: TensorFlow, PyTorch, Scikit-learn, Great Expectations

Tools & DevOps: Git, GitHub Actions, CI/CD, Jupyter, VS Code

Languages

Arabic: Native **French:** Professional **English:** Fluent

Certifications and Awards

- Deep Learning with TensorFlow 2 – Coursera
- Docker Foundations Professional Certificate – Docker

- Anaconda Python for Data Science Professional Certificate – Coursera
- JavaScript Foundations Professional Certificate – Mozilla
