+216 +000 000 0000

Profile

Data & AI Engineer with a strong passion for building scalable data and AI systems. Experienced in designing end-to-end data pipelines, workflow orchestration, and cloud-native architectures that enable intelligent applications. Proven ability to deliver robust, production-grade solutions for complex, distributed environments.

Education

University Name ill 2020 – 2024

B.Sc. in Computer Science

Relevant coursework: Distributed Systems, Big Data Analytics, Machine Learning

Lycée de Sfax ill 2017 – 2020

Scientific Baccalaureate

Professional Experience

Data Engineer ill July 2026 – Present

OliveSoft, Sfax

- Designed and implemented a centralized workflow-orchestration platform, reducing manual pipeline setup time by 45%.
- Built reusable Apache Airflow DAGs and integrated them with n8n, Talend, Azure Blob Storage, GCP, GitHub, SFTP, Power BI, and Cegid Y2, supporting 12 business units.
- Established GitOps-based CI/CD pipelines for DAG validation and versioning, cutting deployment errors by 30%.
- Containerized the platform with Docker on Azure VMs and introduced Datadog monitoring, achieving 99.8% uptime.
- Implemented RBAC, authentication, and metadata management, enhancing security compliance (ISO 27001) across the workflow ecosystem.

Data Engineer ill Feb 2026 – July 2026

OliveSoft, Sfax

- Automated enterprise ETL and workflow orchestration for 8 core systems, processing > 2 TB of data daily.
- Developed end-to-end pipelines that decreased data latency from 12 h to 2 h.

Data Engineer ill July 2025 – Aug 2025

Zetta-Spark, Sfax

- Designed and deployed a secure multi-node Apache NiFi cluster using Ansible, increasing ingestion throughput by 60%.
- Implemented an ETL pipeline from MySQL to HDFS, reducing data staging time by 35%.

Big Data Engineer ill July 2024 – Aug 2024

Zetta-Spark, Sfax

- Migrated the Big Data platform to Ubuntu 22.04 with full Ansible automation, cutting provisioning time from 3 days to 4 hours.

Data Engineer ill Feb 2023 – Jun 2023

DK Soft AI, Sfax

- Configured and automated an ELK stack (Elasticsearch, Logstash, Kibana) for social-media analytics, handling 1 M+ tweets per week.
- Developed a data-collection pipeline using `snsrape`, cleaning and preprocessing tweets for downstream BERT-based sentiment analysis.
- Created visual dashboards in Kibana that reduced reporting turnaround from 48 h to 6 h.

Academic Projects

Scalable Real-Time Data Pipeline for IoT Sensors ill Jan 2023 – May 2023

- Developed a Kafka-based ingestion layer and Spark Structured Streaming jobs, achieving sub-second latency for 500 k events/day.
- Integrated the pipeline with GCP BigQuery and Looker, enabling interactive analytics for stakeholders.

Sentiment Analysis Platform for Arabic Tweets ill Sep 2022 – Dec 2022

- Built an end-to-end pipeline (scraping \$
→ cleaning \$
→ BERT fine-tuning) that reached 87% classification accuracy on a manually labelled test set.

- Deployed the model with TensorFlow Serving, serving 10 k requests per day with < 200 ms latency.

Associative Experience

Member – Data Science Club, University Nameill 2022 – 2023

Skills

% **Data Engineering:** Apache Airflow, Apache NiFi, Kafka, Spark, Hadoop, ETL design

Cloud Platforms: Google Cloud Platform, Azure, Docker, Kubernetes

Programming: Python, SQL, Bash, Java, C

DevOps & Automation: GitOps, CI/CD (GitHub Actions, GitLab), Ansible, Terraform

Analytics & Visualization: Power BI, Looker, Kibana, Tableau

Languages

Arabic: Native **French:** Professional **English:** Professional

Certifications and Awards

- Introduction to Data Engineering (Google Cloud)
- Associate AI Engineer for Data Scientists (Google Cloud)
- Lessentiel de Power BI (Microsoft)
- AI Engineer (Coursera)
- SQL for Data Science (Coursera)
